DETAILED ACTION

Applicant's election without traverse of Species 6 (Figs. 16 A-16D) and subspecies 1 (without a tether) in the reply filed on 4/9/07 is acknowledged. Claims 32-36,38,39, and 44 are pending, claim 37 has been withdrawn.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 32-36,38,39, and 44 are rejected under 35 U.S.C. 102(b) as being anticipated by Scott et al. (U.S. Patent No. 5,334,196).

Claim 32:

Scott teaches a tool for applying an implantation force to a fastener sized and configured for implantation in tissue in response to an implantation force applied according to prescribed conditions, the tool comprising a tool body (12), a driven member carried by the tool body and being operable to apply the implantation force (35, Fig. 4), a mechanism on the driven member to couple the fastener to the driven member to transfer the implantation force from the driven member to the fastener (28, Fig. 2), a controller coupled to the driven member (36), the controller including an initial phase operating the driven member to apply the implantation force under conditions than are short of the prescribed conditions (with 36 is moved it applies the implantation force), a

Art Unit: 3734

lull phase commencing at the end of the initial phase interrupting operation of the driven member (the lull phase is inherently the time period after the implantation), a final phase operating the driven member under conditions that supplement the conditions of the initial phase to achieve the prescribed conditions (Fig. 5), the controller requiring, after the initial phase, a prescribed command to advance from the lull phase to the final phase (the prescribed command is the trigger being activated, 36, Fig. 4). Claims 33 and 34:

Scott teaches the prescribed command is based on input from an operator and upon input reflecting a sensed operating condition (inherently using 36 is input from an operator, the sensed operating condition is when the latch of 48 moves, col. 6, II. 37,38). Claim 35:

Scott teaches the driven member is also operable to apply a removal force to withdraw the fastener from tissue (Fig. 6, 24 applies force), and wherein the controller includes a removal phase operating the driven member to apply the removal force (Fig. 6), the controller requiring, after the initial phase, a different prescribed command to advance from the lull phase to the removal phase (moving 36, col. 4, II. 62).

Claim 36:

Scott teaches the driven member is rotated in one direction to apply the implantation force (32 pivots, col. 4, II. 62) and rotated in an opposite direction to apply the removal force (Figs. 4 and 6).

Claims 38 and 39:

Scott teaches the tool body includes a tube (8) that carries the driven member (32/36) and the driven member is rotated (rotates, 124, Fig. 5) to apply the implantation force.

Claim 44:

Scott teaches coupling a fastener to the driven member, accessing a tissue region, operating the driven member during the initial phase to partially implant the fastener in the tissue region (abstract line 2 and 3), deciding during the lull phase to commence the final phase, entering the prescribed command to advance from the lull phase to the final phase (col. 4, II. 62), thereby completing the implantation of the fastener in the tissue region.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Melissa Ryckman whose telephone number is (571)-272-9969. The examiner can normally be reached on Monday thru Friday 7:30-4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jackie Ho can be reached on (571)-272-4696. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only.
